

Make the switch to solar

What if you could lower your utility bill and purchase renewable energy?

Sunnova offers a new way to go solar. We make it simple to choose clean energy while paying less for electricity.

Going Solar With Sunnova

Sunnova brings solar power to you. We work with top-notch solar contractors in your area to build and install a solar system specifically designed for your roof.

Because we own, monitor and maintain the system, you benefit from cheaper power without the hassle and upfront cost of purchasing a home solar system.

When you sign up for solar service with Sunnova, you purchase power at a low, fixed rate through the life of the agreement. We guarantee that our system will generate a minimum amount of power. If it doesn't, we'll reimburse you for the difference.

The average retail price of electricity has risen every year for the last ten years. With solar service from

Sunnova, you'll see your savings increase every year.

Solar Service Agreement

Our solar service agreement model removes traditional barriers to going solar – like the high initial cost of equipment, insurance costs, maintenance costs, and the expertise required to design the most effective system for your location. Every Solar Service Agreement from Sunnova includes:

- **Expert Design and Installation.** Our local partners are knowledgeable, experienced solar contractors with proven track records of quality solar installations.
- **System Maintenance and Warranty.** Sunnova owns the solar equipment and will take care of any repairs or replacements for the life of the system.
- **Insurance.** Our comprehensive coverage insures your system against damage and theft.
- **System Monitoring.** We continually monitor your system's performance. If we detect any issues, we will dispatch our service teams to diagnose and correct the problem.
- **Performance Guarantee.** If your system doesn't produce what we say it will, we pay the difference.

The Solar Service Advantage

More than 8 out of 10 homeowners choose solar as a service instead of purchasing or financing a system.

	Purchasing/Financing a Solar System	Signing up for Solar Service
 Upfront Cost	Solar equipment and installation is expensive: initial investment of \$25,000 – \$50,000.	Sunnova owns the solar equipment and pays for design and installation of a system that works best for your roof.
 Product Warranty	The equipment itself may have a warranty.	Our entire system is covered under warranty.
 Insurance	You'll have to pay for a separate policy, or add to your homeowner policy.	Sunnova insures the system throughout the life of your contract.
 Monitoring	Not typically included, but can be added at an additional cost.	We monitor your solar system and its performance for free.
 Performance Guarantee	System output is not guaranteed.	Sunnova guarantees your system will produce a certain amount of energy. If it doesn't, we pay the difference.
 Quality Control	There is no third party testing or quality assurance in place.	We inspect and test every system design to insure it meets the highest standards.
 Initial Savings	It takes years to recoup your investment, due to the high upfront cost.	Start saving money right away.
 Moving	If you move, you have to pay off the loan, if financed, and the new homeowner benefits from the system you paid for.	If you move, simply transfer the service agreement to the new homeowner or move the system to your new home.

About Sunnova

Sunnova Energy Corporation offers long-term, low-cost electricity to homeowners in over **18** states and territories. We **own** and **maintain** best-in-class solar systems on residential roofs.

Our leading customer service teams monitor production and oversee maintenance on all of our systems. Sunnova's meter technology allows you to track your system's energy production online. So sit back, enjoy the sun, and watch your solar system generate savings.
